/note="Organ: leaf; Vector: RescueMu (engineered from pBlueScript backbone); Site 1: BamHI; Site 2: BglII; RescueMu is a 4.9 kb, modified maize Mu transposon designed to allow plasmid rescue from total genomic DNA. Mu elements insert preferentially into transcription units. For more information on RescueMu, got to the web site 'www.zmdb.iastate.edu' and follow the links for 'RescueMu, Grid H was grown at Berkeley in 2001. DNA was extracted from leaf punches, double digested using BamHI and BgIII, and ligated to form circular plasmids. DH10B cells were transformed and then screened on LB plates with ampicillin."

                                                                                                                                                                                                                                                                                                                                                                                                                                   ð
                                                                                                                                                                                                                      quantities of 4 pools of mRNA. The mRNA sources were 1) 7 day germinated etiolated seedlings; 2) tissue culture grown roots; 3) staged plants half with 24 hour light cycle, half on 16 hr light, 8 hour dark-rosettes; 4) same plants as 3 but aerial tissue (stems, flowers and siliques. The vector is BRL's lambda Zip-Lox. The cDNA inserts were directionally cloned with Sal-Not arms using of 70 c 55 g 72 t 12 others

/tissue_type="germinating spore tissue"
/dev_stage="l0 days after germination"
/lab host="E. coli BM 25.8"
/note="Vector: Lambda Triplex2; Site_1: SfilA; Site_2:
SfilB; Spores were germinated in the presence of 1% CO2.
At 10 days, tissue was ground in liquid nitrogen with sand and mRNA isolated with a modified hot phenol/SDS method.
The SMARN-PCR method (Clontech) was used for cDNA synthesis from 1 ug of total RNA followed by directional cloning in Sfil idgested Triplex2 vector. Plasmid subclones in pTriplEx were recovered by cre-lox excision in E. coli strain BM25.8 and sequenced from the 5' end with the 5'Triplex sequencing primer (Tpx) and the 3' end with the Triplex sequencing primer (Tpx) and the 3' end with the Triplex sequencing primer (Tpx) and the 3' end with the Triplex sequencing primer (Tpx) and the 3' end with the Triplex sequencing primer (Tpx) and the 3' end with the Triplex sequencing primer (Tpx) and the 3' end with the Triplex sequencing primer (Tpx) and the 3' end with the Triplex sequencing primer (Tpx) and the 3' end with the Triplex sequencing primer (Tpx) and the 3' end with the Triplex sequencing primer (Tpx) and the 3' end with the Triplex sequencing primer (Tpx) and the 3' end with the Triplex sequencing primer (Tpx) and the 3' end with the Triplex sequencing primer (Tpx) and the 3' end with the Triplex sequencing primer (Tpx) and the 3' end with the Triplex sequencing primer (Tpx) and the 3' end with the Triplex sequencing primer (Tpx) and the 3' end with the Triplex sequencing primer (Tpx) and the 3' end with the Triplex sequencing primer (Tpx) and the 3' end with the Triplex sequencing primer (Tpx) and the 3' end with the Triplex sequencing primer (Tpx) and the 3' end with the Triplex sequencing primer (Tpx) and the 3' end with the Triplex sequencing primer (Tpx) and the 3' end with the Triplex sequencing primer (Tpx) and the 3' end with the Triplex sequencing primer (Tpx) and the 3' end with the Triplex sequencing princernal primer (Tpx) and the 3' end with the Triplex sequencing t
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ó

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 pSPORTI vector (Life Technologies) was constructed at the bloserve Biotechnology (Laurel MD) essentially following the protocols of the SuperScript Plasmid System full details of which are contained in the manufacturer's Instruction manual (http://www.lifetech.com/). First strand synthesis was carried out using a Not I primer-adapter [5'-pgAcTrAGTATCGAGGGGGGGGGCGCCC(T)15-3']. EST analysis was performed on the unamplified library at the NIH Intramural Sequencing Center (NISC)."

/close_lib="Sml" | /close_lib="Sml" | /close_lib="Wetor: pBeloBACI1; Site_1: Hin dIII; Constructed in the laboratory of Dr. Denis De Pasiler at the Fondation Jean Dausset, CEPH, Paris, France. Briefly, Schistosoma mansoni agarose embedded DNA was partially digested with Hin dIII. High molecular weight fragments were ligated in pBeloBACI1 digested with Hin dIII. The average insert size is 100 kb. Total clone coverage: approx. 7.95 X the haploid genome. Further information can be found in Le Paslier et al. (2000) Construction and characterization of a Schistosome mansoni bacterial artificial chromosome library. Genomics 65: 87-94."

XhoI; The CDNA library was constructed from mRNA isolated
from stem tissue of 1 month old greenhouse grown plants
for the cultivar Raiden. Complementary DNA was
synthesized from mRNA using a primer consisting of a
poly(dT) sequence with a XhoI restriction site. ECORI
adapters were ligated to the blunt-ended cDNA fragments
followed by XhoI digestion. The CDNA fragments were
directionally cloned into the ECORI-XhoI restriction site
of the pBluescript vector. The ligated cDNA fragments were
transformed into DH10B host cells (GibcoRRL). This library
was constructed in the laboratory of Dr. Randy Shoemaker."

/Globe_lib="moutiness" / Globe_lib="Entamones histolytica Sheared DNA" / Glone_lib="Wector: pH0S1; Site_!: Bat I; Constructed at The Institute for Genomic Research (TIGR), Rockville, MD. Genomic DNA isolated from broth cultures of E. histolytica using a method described by Clark and Diamond, L.S. (1993) Entamoba histolytica: a method for isolate identification. Exp. Parasitol. 77:450.). The DNA was mechanically sheared to give a tight size distribution (-2 kD). The v + i method used for the library construction is described in detail in Smith, H.O. and Venter, U.C. (Making small insert libraries for whole genome shotgun sequencing projects. In Genome Sequencing: A Practical Approach, eds. M. Vaudin and B. Barell, Oxford University Press, 1999)."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ACENCOURT 6853665 NIH_MGC_99 Homo sapiens cDNA clone IMAGE:5926529 5', mRNA sequence.

Clones are derived from the Entamoeba histolytica HM1:IMSS sheared
DNA library. M13-Reverse
Class: shotgun
Entamoeba histolytica
Eukaryota; Entamoebidae; Entamoeba.
1 (bases 1 to 944)
Loftus, B., Van Aken,S. and Fraser,C.
Determination of clone end sequences from Entamoeba histolytica
HMI:IMSS sheared DNA library
